SMART WORKSPACE SOLUTIONS

Advanced Face Recognition will bring your office into the digital future.

SMART TECH

# WELCOME TO THE SMART WORKSPACE SOLUTIONS

Transform your business with a suite of contactless digital systems that accommodate both employees and visitors. Powered by **Advanced Face Recognition Technology** and **Smile Recognition Technology**, you can manage your entire workspace seamlessly with enhanced efficiency and security while lifting office morale.

VISITOR MANAGEMENT SYSTEM
Managing your guests can now be done in a fast, secure, and effective manner. Guests simply register with a quick face scan at the sign-in station and enter their details. Digital data is kept on file for easy management. On return visits, guests are identified via face-recognition technology, and a welcome message appears on a video monitor. Once approved, visitors are able to access designated areas, eliminating crowded reception rooms. Office efficiency, security, and professionalism are greatly expanded.

FACILITIES BOOKING SYSTEM : ROOM BOOKING / HOT DESK BOOKING
Employees can plan and book a room/desk prior to a meeting or their arrival at the office. Meeting notifications will be sent to each guest. By scanning a QR code on the desk or via face recognition on the tablet, employees can easily check in to the facilities or hot desk. Insightful data from statistical analysis reports will be generated for efficient space planning or crowd management.

SECURE PRINTING CONTROL
Printing sensitive documents can now be done securely and at greater convenience with Canon Multi-function devices using uniFLOW print management! Documents are released to authorised personnel (sender) only after identity is authenticated. Employees can also scan and send documents securely to their email account or their document management systems.

ACCESS CONTROL
Using face recognition and smile recognition, Access Control grants entry only to authorised personnel and provides temperature screening. Various profiles can be set to limit access to restricted areas and data can be integrated with the HR system for time and attendance data.

ADVANCED FACE RECOGNITION TECHNOLOGY
Works even with masked faces, as deep learning capabilities allow it to compare real-time data to stored data. Requires an actual face for authentication, which prevents spoofing.

✓ Secure, convenient, and reduces administrative workload.

✓ Useful data for resource planning and attendance monitoring.

✓ Customisable & Scalable according to individual requirements.

SMILE RECOGNITION TECHNOLOGY
Brighten up the workspace environment with a smile! While accessing the office, you can give a big smile to start the day well.

ACCESS CONTROL

Enjoy unprecedented levels of office efficiency: multiple authentication methods for both visitors and staff, facility-wide zone control, and the ability to sync data with attendance records. With Secure Printing, documents are never released without authentication, and you can monitor resource usage in real time.

BENEFITS
✓ Enhanced office security
✓ Increased professionalism
✓ Efficient data collection
✓ Synchronized record keeping
✓ Maximum convenience

Multiple Authentication Methods
Facial Recognition, Access Card or Mobile

FR Speed & Accuracy
40 faces per minute at +99% accuracy.

FR With Mask
Accurately identifies masked visitors.

SECURE PRINTING

BENEFITS
✓ Document security
✓ Controlled printer Access

UniFLOW Document Security
Documents released only to initiator.

Face Recognition Security
Ensures authentication before printing.

VISITOR MANAGEMENT

Visitor Management makes it easy to register and welcome guests, both invited and walk-ins. It's efficient, secure, and highly professional. Ultimately, Visitor Management heightens productivity in the office.

INVITED GUEST

1. Host registers guest prior to visit.

2. Guest receives confirmation SMS.

WALK-IN GUEST

1. Guest scans QR code at self-service kiosk to access registration page.

2. Host is notified of guest's arrival. Once host approves, an SMS is sent to guest.

3. SMS contains URL link to QR code.

4. Guest checks in using QR code.

5. Host is notified of guest's arrival.

6. After meeting, guest signs out with same QR code.

7. Host is notified when guest signs out.

BENEFITS
✓ Enhanced office security
✓ Improved efficiency
✓ Ensures data privacy of guests
✓ Positive & professional image

EXPERIENCE THE NEW WORK STYLE

MEETING-ROOM & HOT-DESK BOOKING

This future-focused booking system allows you to manage onsite facilities with exceptional efficiency and security. Optimize the use of meeting rooms and work desks using multiple authentication methods including face recognition, QR codes, and pads.

Floor-Plan Display
Holistic view of occupancy with real-time air quality data.

BENEFITS
- ✓ Zero scheduling conflicts
- ✓ Optimal facility usage
- ✓ Real-time occupancy data via dashboard
- ✓ Enhanced environmental conditions in rooms
- ✓ Enhanced employee satisfaction

Operational Insights
Monitor real-time occupancy via dashboard.

Cloud Connections
Integration with IOT

Air Quality Monitor
Real-time data on temperature & air quality.

Face Recognition
Face recognition adds a layer of security.

Room check-in & status screens
